

HTSolutions is your expert for highly complex machining demands in the high-tech segment, specializing in the following core competencies:

Motor sports

High performance and quality are crucial in racing. HTSolutions is your strong partner in the fields of engine and chassis components and for chassis themselves.

Toolmaking

We manufacture precise and individually specialized tools, molds, fixtures and components for your distinct applications.

Aerospace

We produce housings from solid or cast materials for the defense sector. Products for the field of prototype construction and other assembly activities round out our portfolio.

Our Passion:

Our passion is taking on challenges and always living up to our customers' high expectations. Motivation, competence and the continuous improvement of our processes allow us to turn the complex ideas of our customers into reality every single day.

Extensive Knowledge:

We can proudly look back on decades of experience and expert know-how in the field of machining. We ensure and maintain the highest standards at all levels by supporting our staff in their continuous education and training.

Partnerships:

Our partners and suppliers are decisive factors in our commitment to quality and flexibility.

We cultivate the constant exchange of information with our suppliers and partners, always paying careful attention to fair, appreciative interaction, complying with legal requirements and adhering to customer-specific requirements.

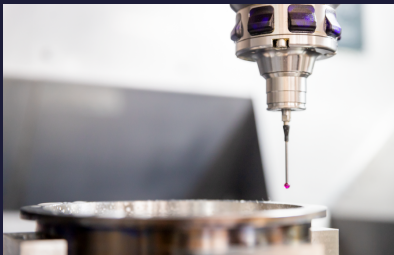

Environmental and Legal Issues:

We are committed to complying with all of the environmental, energy and occupational safety laws relevant to HTSolutions, fulfilling any legal and regulatory requirements and trusting in our internal compliance policies.

Our Three Pillars:

It is the coordinated combination of three factors: quality - technology - mindset that enables us to be a partner for renowned international customers in the field of machining.

Quality

- Precision
- Delivery reliability
- Quality management
- Staff skills and competence
- Documentation

Technology

- A high-end machining park
- Reliable and sophisticated measurement technology
- The most modern CAD/CAM programs
- ERP systems
- QM systems

Mindset

- Highly developed communication and information processes
- Living CIP on a daily basis
- Goal orientation
- The conscious acceptance of responsibilities and challenges
- Perseverance
- A willingness to learn
- Team spirit
